## 2. Prototype and Usage

The prototype can be accessed through:

[https://s4443483-deco7180.uqcloud.net/deco7350/login\\_carer.html](https://s4443483-deco7180.uqcloud.net/deco7350/login_carer.html)

It is a application designed for mobile devices. To view it in the correct size please use chrome developer mode and select Iphone 6. Or please use a smartphone to test the prototype.

- **For Pet Carers:**

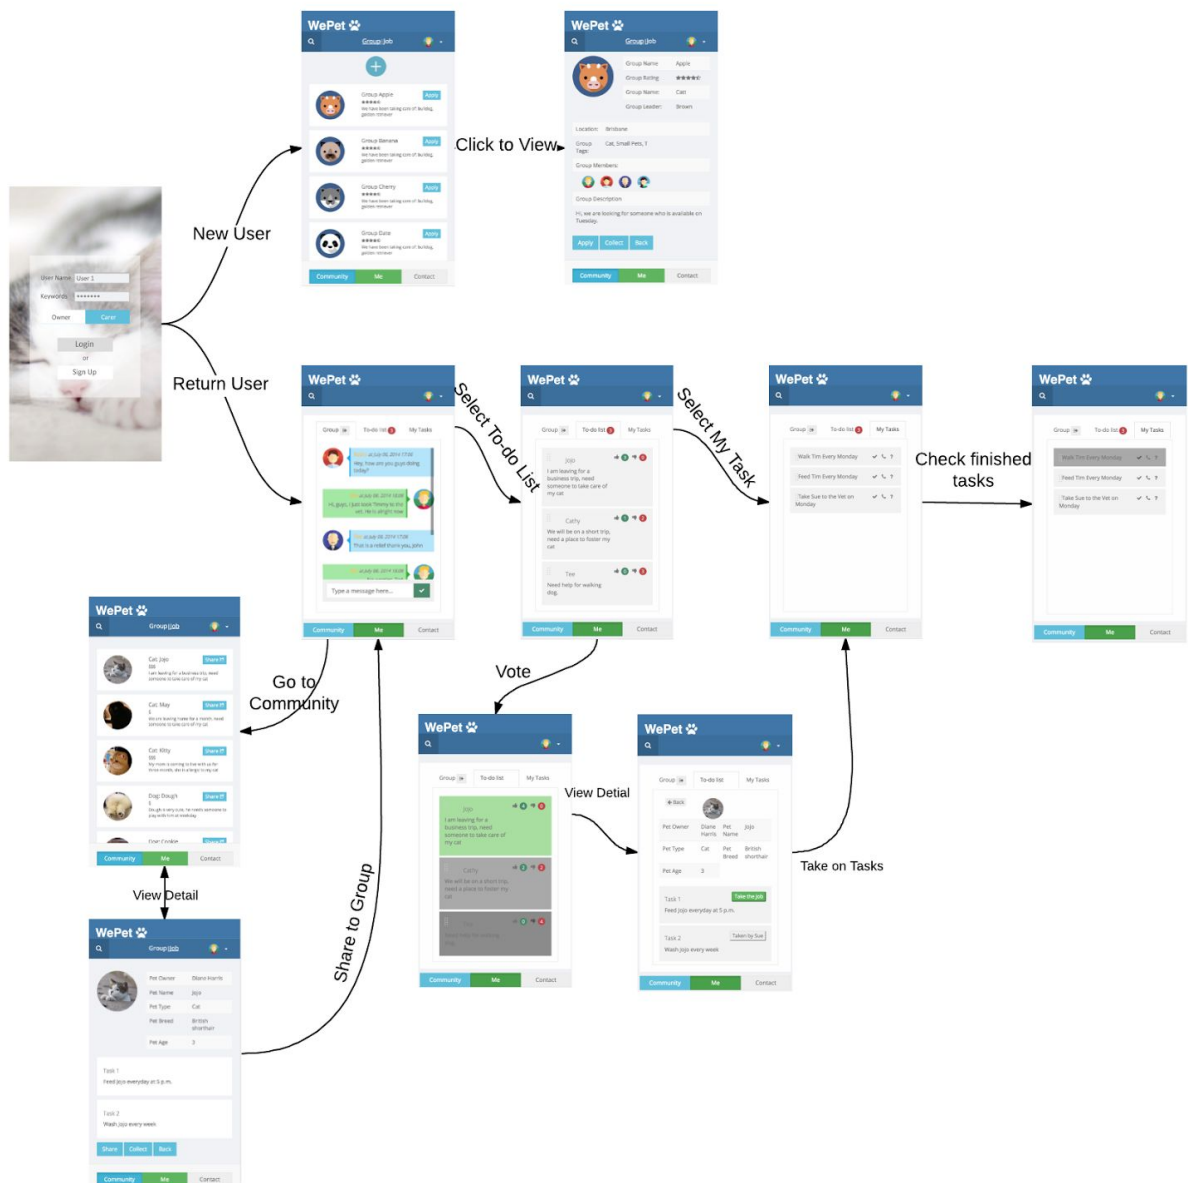

Figure 3 Task Flow for Pet Carer

- **For Pet Owners:**

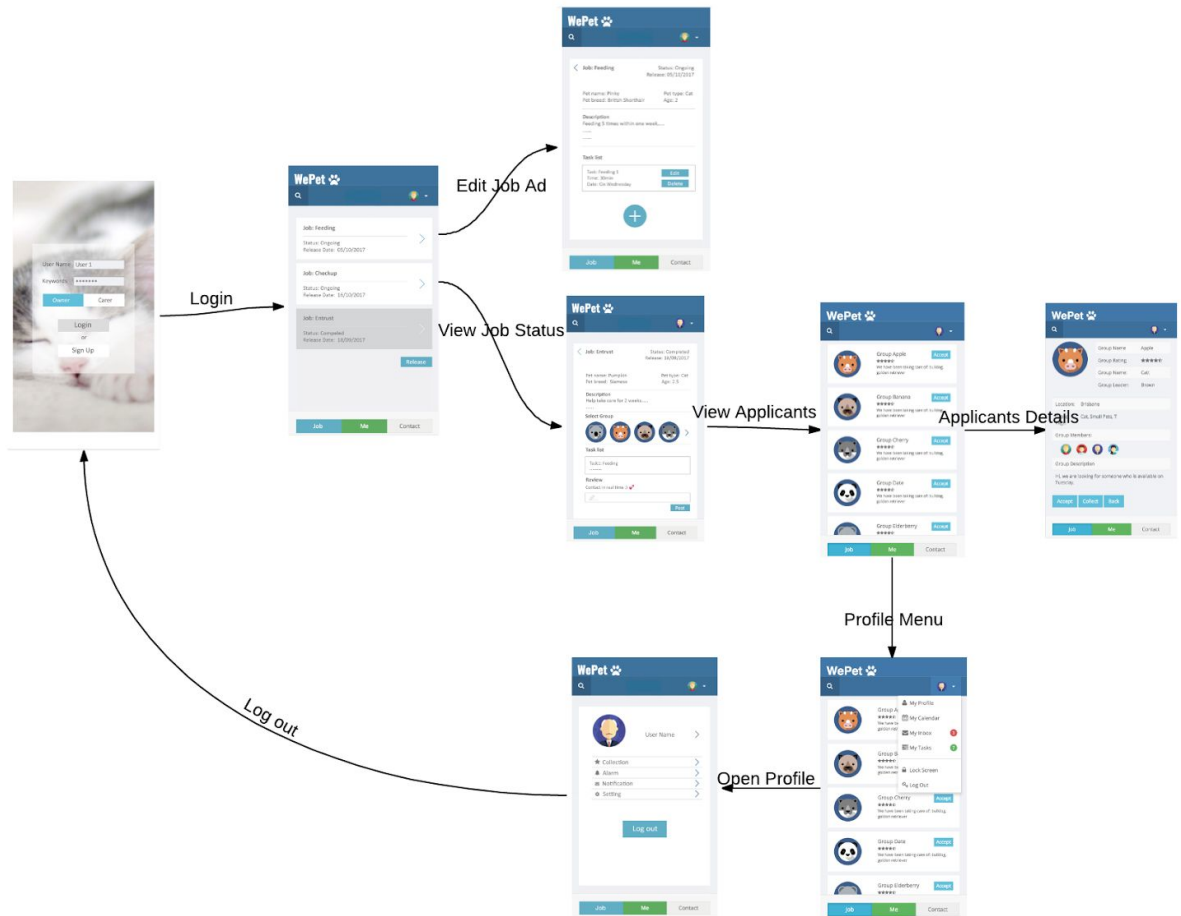

Figure 4 Task Flow for Pet Owner

The final prototype is build based on HTML, CSS and Javascript. The interface is modified based on the template from <http://madmin.swlabs.co/>.

### 3. Project Summary

The initial problem space came from the acknowledgement of the important role of pets in our life. Therefore, the project aimed to provide a mobile application that could support both pet owners and pet carers with a virtual community where they could equally and efficiently share information, collaborate and keep track of their pets. The pet carers mentioned in the problem space are the type of target users who generally do not own any pets for many reasons, but they wish they could overcome the problems and build connection with small animals. While the pet owners are users who own one or more pets but are seeking help for pet caring services.

To address this problem, we have designed an application that has tailor-made interfaces and functionalities for the two types of target users, who are pet carers and pet owners. The main functionalities for pet owners are posting job requirements, selecting a pet carers group, joining the communication and tracking the job status. On the other hand, for pet carers, the main functionalities are forming groups, searching and applying jobs as a group, and sharing works as a group. The main purpose of the application is to form pet carer groups to support pet carers who have difficulties keeping pets but have strong interests in animals. In the meantime, it also aim to provide pet owner with high quality and reliable pet fostering and caring services.

### 4. Design Process

To tackle this problem, we have designed an application that is tailor made for the two types of target users, who are pet carers and pet owners. The design process of the application follows the user centered design lifecycle. Figure 5 contains a timeline for this project and each phase is color coded with the UCD lifecycle shown in Figure 6.

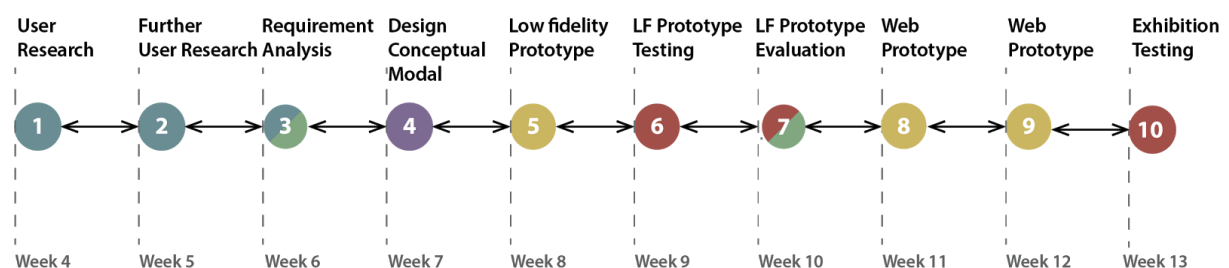

Figure 5 Project Timeline

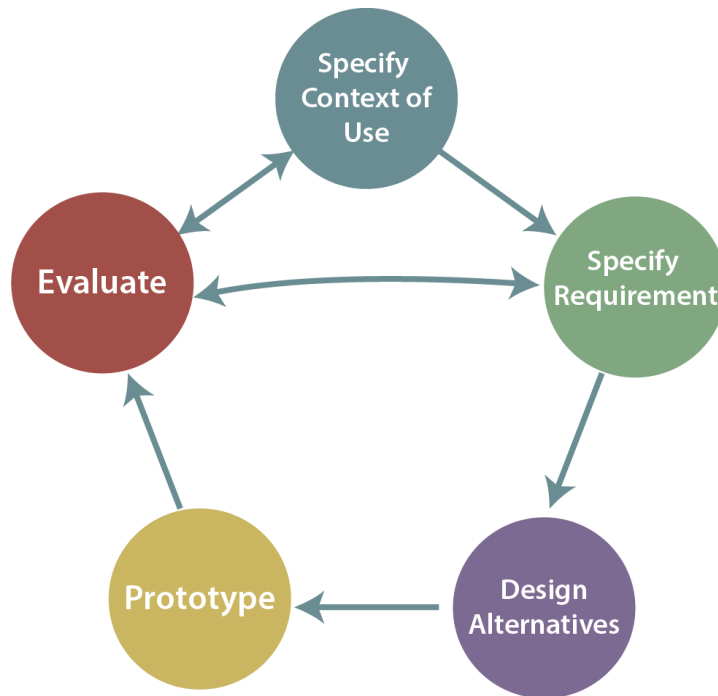

Figure 6 UCD Process

View the clear picture at GitHub:

<https://github.com/deco3500-2017/Team-WeChat/blob/master/Documents/ProcessCharts/UCD.png>

As the problem space is new, we have conducted two rounds of user research to understand the requirements and concerns of our end users. The first one targeted both user types to identify the possibility of pet caring in a group. With a positive feedback, we started the next investigation on pet owners' concerns while using pet fostering or other caring services. Based on the background research, we generated two personas:

"I want to have a professional group to take care my pets."

**Age:** 45  
**Work:** Businessman  
**Family:** Married  
**Location:** Brisbane, QLD

### Personality

Easygoing

Compassion

Responsible

### Goals

- Professional staffs take care his pets.
- Ensuring the living standard of his pets.
- Meet another pets lovers.

### Frustrations

- Cannot take care of his pets due to the frequent travel overseas.
- The living standard of current pet care agent is uncomfortable.

### Bio

Robert is a businessman who has his own company. His company has corporations with other countries so that he has to travel overseas for the business. His wife usually travels with him. As a consequence, he has no choice but to leave his pets, two cats and a dog, in the pet care agent. However, the living quality in current pet care agent is very uncomfortable. The pets are kept in the cage all days and one pet care agent normally keeps many pets. Robert is very worried about the health and emotions of his pets. He wants to have a professional group to take care his pets.

### Motivation

### Brands & Influencers

### Preferred Channels

Figure 7 The Persona for Pet Owner

Based on the gained knowledge, we entered the prototyping phase and made our first low fidelity prototype from scratch. We first meant to make a single application for both pet owners and carers while the pilot test results shown that task flows were over complicated and disordered. Therefore, we redesigned the concept and tested with target user groups. At this stage we have tested the system concepts of making two separate applications for carers and owners, including posting jobs and selecting groups for owners, and searching jobs, making decisions as a group.

[https://github.com/deco3500-2017/Team-WeChat/blob/master/Documents/Low-fidelity%20Prototype/test\\_prototype.bmp](https://github.com/deco3500-2017/Team-WeChat/blob/master/Documents/Low-fidelity%20Prototype/test_prototype.bmp)

[https://docs.google.com/document/d/1Gb0z-hN\\_U2ILxLBtM5\\_qSGnhC7PWpl1fekGZ91NX-ZE/edit](https://docs.google.com/document/d/1Gb0z-hN_U2ILxLBtM5_qSGnhC7PWpl1fekGZ91NX-ZE/edit)

The important feedback we received from the testing was that the original system was over-complicated, and the application making and approving procedures were unclear.

The limitation of this prototype testing was the low fidelity prototype can not simulate the real interaction of the group communication and voting system which are important part of the system.

Therefore, we made our second prototype which is a web based application mockup system. Due to the limited developing resource of the team, we have only implemented the sections of job searching, sharing and decision making for pet carers[shown in Figure]. The other parts such as carers' profile management, group administration and contacts were not included.

The following diagram shows the features that have been designed for the project. The application was divided into pet owner ends and pet carer ends. The block's colors are the features implementation stage. The main features have been grouped into three major functions for each user type. The crossed out features are feature eliminated after first user testing session. The pet owner's functions are 'Job', 'Me' and 'Contact' while the pet carers functions are 'Community', 'Me' and 'Contact'.

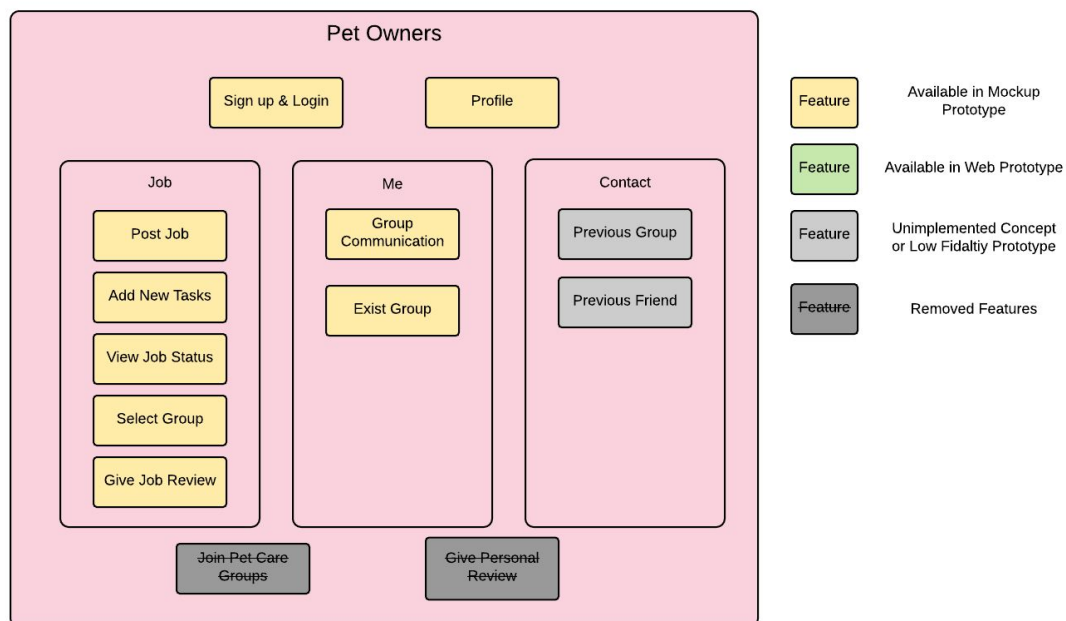

Figure 9 Pet Owner Functionality

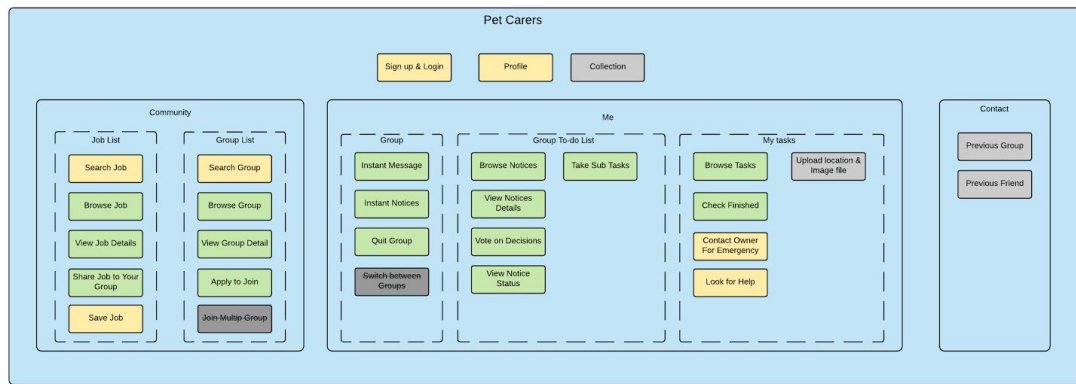

Figure 9 Pet Carer Functionality

View the clear picture at GitHub:

<https://github.com/deco3500-2017/Team-WeChat/blob/master/Documents/ProcessCharts/Pet%20Carer%20Functionality.pdf>

From the final testing, we have collected opinions on how to tackle fringed scenarios, group conflicts and suggested opportunities of task sharing in other problem domains.

[https://docs.google.com/forms/d/14cmdjO3oMz8Vvr8ucW\\_IJ22uRbpVXGw3dhIIWhotUVA/edit?usp=sharing](https://docs.google.com/forms/d/14cmdjO3oMz8Vvr8ucW_IJ22uRbpVXGw3dhIIWhotUVA/edit?usp=sharing)

For future works, we are planning to include single carers to increase the flexibility of the application so that it could attract more potential users. To enable the option, we will need to go back to low fidelity prototype to test the basic concept. In addition to the new option for pet carers, we also planning on enable more job and task report system so that pet owners would be able to know more about condition of their fostered pets.

## 5. Work Breakdown

This form describes the work breakdown within our team during the development process.

Group Member	Timeslot	Work Description	Reference Link
Jiajing Sun	Week 4 & 5	Background Investigation & Target Audience	<a href="https://github.com/deco3500-2017/Team-WeChat/blob/master/Documents/Requirements/Proposal.pdf">https://github.com/deco3500-2017/Team-WeChat/blob/master/Documents/Requirements/Proposal.pdf</a>
